Grinder Specifications

MKH - PLC horizontal spindle rotary table surface grinding machine , a simple numerical control touch screen

series, is my company the upgrading of products for the ordinary grinding machine, adopt touch screen man-machine dialogue operation system and digital servo feed control system. It can realize the function in the original manual upgrade on the basis of the function of automatic machining control, no programming is more simple than CNC operation, machine tool group processing parameters can be set according to the requirements of the machining processing, convenient, simple and intuitive, greatly convenient for the operator of the machine.

MKH CNC series horizontal spindle rotary table surface grinding machine , adopt the advanced CNC control system, powerful, stable performance. Vertical feed and transverse feed two axis linkage, AC servo motor drive, high positioning accuracy, LCD display, has a complete programming and automatic machining compensation function. Process can be automatic cycle, consistency and product processing precision are both good, rotating flexible, high precision. The higher degree of automation, machine tool can realize one operator more machine tools, reduce the enterprise labor costs, improve the quality of product processing, improve the product process quality.

MKH125-360

HORIZONTAL SHAFT ROTARY TABLE GRINDERS

MKH125L-360

MKH125-360

MKH125-350 series beam-style CNC horizontal spindle rotary table surface grinding machine , worktable diameter from 1250-3500mm general layout pattern using worktable fixed rotated on the lathe bed circular guide , double column, beam, dragging plate along the beam to do horizontal reciprocating movement, grinding head along the dragging plate vertically into to the layout of the model. The whole structure is compact, high precision, reliable performance, good manufacturing process, convenient operation and use.

MKH - PLC horizontal spindle rotary table surface grinding machine , a simple numerical control touch screen series, is my company the upgrading of products for the ordinary grinding machine, adopt touch screen man-machine dialogue operation system and digital servo feed control system. It can realize the function in the original manual upgrade on the basis of the function of automatic machining control, no programming is more simple than CNC operation, machine tool group processing parameters can be set according to the requirements of the machining processing, convenient, simple and intuitive, greatly convenient for the operator of the machine.

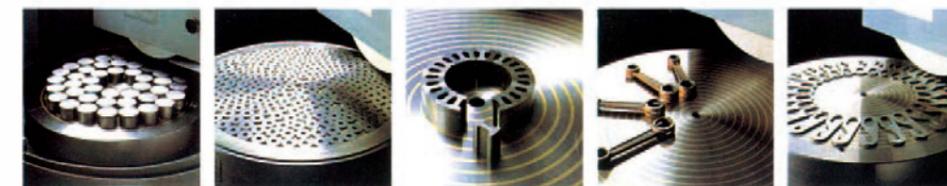

MKH CNC series horizontal spindle rotary table surface grinding machine , adopt the advanced CNC control system, powerful, stable performance. Vertical feed and transverse feed two axis linkage, AC servo motor drive, high positioning accuracy, LCD display, has a complete programming and automatic machining compensation function. The higher degree of automation, machine tool can realize one operator more machine tools, reduce the enterprise labor costs, improve the quality of product processing, improve the product process quality.

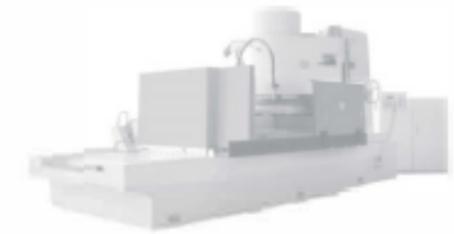

General grinding machine work precision is 0.015/1000mm, Ra0.32-0.63μm

High grinding machine work precision is 0.005/1000, Ra<0.08μm

MKH40

HORIZONTAL SHAFT ROTARY TABLE GRINDER

MKH40 CNC horizontal shaft rotary table grinders used GERMANY SIEMENS company CNC system, powerful function. optimum adaptation. Two spindles interlocks of vertical and cross wise feed AC servo motor drive high accuracy of positioning LCD screen, complete program and automatic processing. Automatic control grinding surface size, precision within 0.001mm, Automatic cycle processing program, realize energy wheel rapid working and feed Decrease time for installing, tool and work pieces, high efficiency precision and reliability, Main spindle of emery wheel with move ad static pressure, constant hydraulic station convenient and flexible high precision, speed and frequency change, relapse control different part constant liner velocity by emery wheel, Max promote efficiency. Grind heed and vertical feed and rapid up-down with quench hardening of steel rolling giveaway, rolling driving, no missing culler, used for liner encoder control CNC system control feed and rapid up-down, Moving through hand wheel of key board also Grinder lubricant is used for oil supply system alone, oil pool in bed easy using and maintain.

MKH50

HORIZONTAL SHAFT ROUND TABLE SURFACE GRINDER

This grinder uses SIMENS numerical control system. Work table revolving uses the hydraulic pressure rail plate, the servo motor-driven. Engine bed vertical, derailing and to feed, uses the ball bearing guide screw, the straight line guide rail, the servo motor-driven. May realize the programming automatic processing and the manual processing. Processing speed and follow-up hand feed speed adjustable, the grinding wheel may repair and maintain automatically, automatic compensation, after elected distribution of light grid ruler closed-loop control, has the high engine bed ability index and the engine bed working accuracy. The platen may incline 3° the grinding concave-convex incline work piece. This engine bed widely is suitable for the ring-like work piece high accuracy grinding and the highly effective grinding, But widely applies in manufacture professions and so on automobile, aviation, tool, gear.

Grinder Specifications

The Vertical Shaft Rotary Table Grinds grinds the machine parts with the end-face of the emery wheel .It is an efficient , precision and stable machine tool

The series of these machine tools have been improved greatly in rigidity of the bed and grinder head .The three-point adjustment has been adopted and ill's mechanism is compact .The bench is a round .strong electro-magnetic chuck, the magnetic force of which is smooth and discharging of the magnetic force is through the controlled silicon ,It has also the characteristic of coolant purifying equipment.

MKV TYPE

CNC VERTICAL SHAFT ROTARY TABLE GRINDER

MKV vertical spindle rotary table surface grinding machine, Simple CNC touch screen series grinding machine, the control system adopts PLC + HMI control mode. It can programming controller combined with human-computer interface, PLC logic operation, sequence control, timing, counting and arithmetic operations such as operation, and through digital and analog input and output, control various types of machinery or production process; And man-machine interface is used for dialogue between operating personnel and control system

CNC grinding machine series adopts advanced digital control system, there are two kinds operation mode of machine tool , manual mode, automatic operation mode. It can realize automatic control, automatic grinding complete cycle. The control panel programming located in the control platform, easy to operate, with LCD screen display Chinese menu and the current position, working condition, process parameter, since the diagnosis operation error fault alarm function. Through the early stage of the production process parameters set, the late production process and machining of just one key can be completed, simplify the production process, it can not only improve the production efficiency, but also reduced the difference of workpiece production.

Specifications

参数Item	MV50P	MKV50	MV75B/P	MKV75B	MV80P	MV7480	MV100P	MKV100
磨削工件最大尺寸 (直径*高) (mm) Max. grinding Size(Dia*H)	φ 500*300	φ 500*300	φ 780*300	φ 780*300	φ 800*300	φ 800*300	φ 1000*400	φ 1000*400
电磁工作台吸力范围 Attraction scope of electromagnetic bench	80-120N/cm ²							
砂瓦尺寸 (厚*宽*长) (mm) Emery tile size	筒形 350X125X280	筒形 350X125X280	筒形 80 X 25 X150
